Publishing and Advertising Offices

Pergamon Press Ltd., Headington Hill Hall, Oxford OX3 0BW (Oxford 64881; Telex 83177).

Subscription Rates (1983)

For libraries, university departments, government laboratories, industrial and other multiple-reader institutions: US $225.00 per annum. Two-year rate (1983–84): $427.50 (including postage and insurance). Subscription enquiries from customers in North America should be sent to: Pergamon Press Inc., Maxwell House, Fairview Park, Elmsford, NY 10523, USA, and for the remainder of the world to: Pergamon Press Ltd., Headington Hill Hall, Oxford OX3 0BW, UK.

Specially Reduced Rates for Individuals. In the interests of maximizing the dissemination of the research results published in this important international journal, we have established a two-tier price structure. Any individual, whose institution takes out a library subscription, may purchase a second or additional subscriptions for *personal* use at the much reduced rate of US $55.00 per annum.

Microform Subscriptions and Back Issues: Back issues of all previously published volumes are available in the regular editions and on microfilm and microfiche. Current subscriptions are available on microfiche simultaneously with the paper edition and on microfilm on completion of the annual index at the end of the subscription year.

Published Monthly

It is a condition of publication that manuscripts submitted to this journal have not been published and will not be simultaneously submitted or published elsewhere. By submitting a manuscript, the authors agree that the copyright for their article is transferred to the publishers if and when the article is accepted for publication. However, assignment of copyright is not required from authors who work for organisations which do not permit such assignment. The copyright covers the exclusive rights to reproduce and distribute the article, including reprints, photographic reproductions, microform or any other reproductions of similar nature and translations. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, electrostatic, magnetic tape, mechanical photocopying, recording or otherwise, without permission in writing from the copyright holder.

U.S. Copyright Law Applicable to Users in the U.S.A.

The Article Fee Code on the first page of an article in this journal indicates the copyright owner's consent that, in the U.S.A., copies may be made for personal or internal use provided the stated fee for copying, beyond that permitted by Section 107 or 108 of the United States Copyright Law, is paid. The appropriate remittance should be forwarded with a copy of the first page of the article to the Copyright Clearance Center Inc., 21 Congress Street, Salem, MA 01970. If a code does not appear copies of the article may be made without charge, provided permission is obtained from the publisher. The copyright owner's consent does not extend to copying for general distribution, for promotion, for creating new works or for resale. Specific written permission must be obtained from the publisher for such copying. In case of doubt please contact your nearest Pergamon office

VOLUME CONTENTS

VOL.
6
1982

VOLUME 6 NUMBER 1

R. KANNAN and V. LAKSHMIKANTHAM	1	Periodic solutions of nonlinear boundary value problems
K. SINGKOFER	11	Periodic solutions of equations with nonlinearities involving the derivatives
L. ERBE and S. MYSORE	21	Comparison theorems and non-oscillation for differential equations in a B^*-algebra
N. H. PAVEL and C. URSESCU	35	Flow-invariant sets for autonomous second order differential equations and applications in mechanics
A. RASCANU	75	On some stochastic parabolic variational inequalities
A. SZULKIN	95	On the number of solutions of some semilinear elliptic boundary value problems

VOLUME 6 NUMBER 2

A. A. FREIRIA and J. G. DOS REIS	117	Uniform asymptotic stability of perturbed systems of neutral differential equations
S. TOTARO	125	On a model for pulse propagation in a nerve
K. C. CHANG, S. LI and G. C. DONG	139	A new proof and an extension of a theorem of P. Rabinowitz concerning nonlinear wave equations
R. E. BRUCK, W. A. KIRK and S. REICH	151	Strong and weak convergence theorems for locally nonexpansive mappings in Banach spaces
M. ALTMAN	157	A generalization of the Brézis–Browder principle on ordered sets
M. ALTMAN	167	The method of contractor directions for nonlinear elliptic equations
M. PIERRE	175	Uniqueness of the solutions of $u_t - \Delta\phi(u) = 0$ with initial datum a measure
L. MCLINDEN	189	An application of Ekeland's Theorem to minimax problems

VOLUME 6 NUMBER 3

R. M. TORREJÓN	197	Remarks on nonlinear functional equations
M. A. PRESTEL	209	Forced oscillations for the solutions of nonlinear hyperbolic equation
D. R. DUNNINGER	217	Existence of solutions of nonlinear singular elliptic problems
A. G. KARTSATOS and J. TORO	225	Passivity and admissibility for evolution equations in Banach spaces

L. Bao-Ping and C. V. Pao	237	Periodic solutions of coupled semilinear parabolic boundary value problems
M.-F. Bidaut-Veron	253	Variational inequalities of order $2m$ in unbounded domains
A. G. Kartsatos	271	Mapping theorems involving ranges of sums of nonlinear operators
E. DiBenedetto and R. E. Showalter	279	A pseudo-parabolic variational inequality and Stefan problem

VOLUME 6 NUMBER 4

D. C. Benson	293	Asymptotic directions for solutions of Liénard systems
B. Jones	303	A note on the T_{+m} transformation
M. E. Parrott	307	Representation and approximation of generalized solutions of a nonlinear functional differential equation
G. Fusco and L. Pasquini	319	Generic existence of pattern equilibria for a selfpotentiating liquid layer
Bui An Ton	335	On a free boundary problem for an inviscid incompressible fluid
I. Miyadera and K. Kobayasi	349	On the asymptotic behaviour of almost-orbits of nonlinear contraction semigroups in Banach spaces
J. R. Ward Jr	367	Perturbations with some superlinear growth for a class of second order elliptic boundary value problems
B. D. Craven and M. Z. Nashed	375	Generalized implicit function theorems when the derivative has no bounded inverse
I. P. Stavroulakis	389	Nonlinear delay differential inequalities
A. Casal and A. Somolinos	397	Forced oscillations for the sunflower equation, entrainment

VOLUME 6 NUMBER 5

G. Conti and R. Iannacci	415	Nonzero solutions of nonlinear systems of differential equations via fixed point theorems for multivalued maps
W. O. Ray and A. M. Walker	423	Mapping theorems for Gâteaux differentiable and accretive operators
C. M. Dafermos and L. Hsiao	435	Global smooth thermomechanical processes in one-dimensional nonlinear thermoviscoelasticity
L. C. Evans	455	A chemical diffusion–reaction free boundary problem
Y. Ebihara	467	On solutions of semilinear wave equations
M. Ikeda and D. D. Šiljak	487	Lotka–Volterra equations: decomposition, stability, and structure Part II: Nonequilibrium analysis
A. Lunardi	503	Analyticity of the maximal solution of an abstract nonlinear parabolic equation

NONLINEAR ANALYSIS
THEORY, METHODS & APPLICATIONS

(The International Multidisciplinary Journal for the rapid publication of research papers, survey articles and preliminary communications)

AIMS & SCOPE

Nonlinear Analysis, Theory, Methods & Applications is concerned, as the title stresses, with three major activities. It is a multidisciplinary Journal, which has applications in main academic subjects as well as in industry and government. The Journal will publish important research and expository papers and preliminary communications devoted to solving nonlinear problems in all areas of Theory, Methods & Applications of nonlinear analysis.

Papers that are principally concerned with the theory of nonlinear analysis should contain significant mathematical results. Authors of such papers are encouraged to indicate possible relevance to applications. Those papers which are involved with the methods applicable in solving nonlinear problems should either contain new techniques or more suitable and illuminating methods than those already known. The papers that emphasize applications should consist of valid mathematical models and important real world problems, preferably with some analysis of the data, when existing. Clearly, papers that tend to integrate and interrelate theory, methods, and applications within the scope of the journal will be particularly welcomed.

Expository Papers: The Editors will also encourage the submission of topical expository papers whose aim it will be to inform the specialist about the state of the art of a particular topic or topics of current interest in the field of Nonlinear Analysis.

Preliminary Communications: Nonlinear Analysis is also a medium for the rapid publication of Preliminary Communications in English, French, or German and offers maximum dissemination of outstanding developments in Nonlinear Analysis, its Theory, Methods & Applications. The Editorial Board and referees will endeavour to select those urgent preliminary communications which describe work of special merit. When submitting a preliminary communication, authors should include a brief statement justifying acceptance, in accordance with the following essential requirements:

Does the communication report and advance new ideas, techniques, methods and application, or conclusions of interest to a substantial proportion of people working in the field of Nonlinear Analysis? Does the nature of the work justify urgent publication? Is the work likely to stimulate ideas? Is the presentation clear and precise? Preliminary Communications will be reproduced photographically and should be no more than 4 pages long.

INSTRUCTIONS TO CONTRIBUTORS

General: The Editor will be pleased to receive contributions from all parts of the world and manuscripts for publication should be submitted to either the Editor or to a member of the Board of Associate Editors who, in the opinion of the author, is most closely concerned with the topic of the paper.

Only papers not previously published will be accepted, and authors must agree not to publish elsewhere a paper submitted to and accepted by the Journal.

Whenever possible authors are requested to submit their manuscripts in English. From time to time special survey articles may be invited from outstanding authorities in various specialties.

Preliminary Communications will also be published. These will be produced photographically and should be no more than 4 pages long.

The original manuscript and diagrams will be discarded one month after publication unless the Publisher is requested to return original material to the author. Reprint copies can be purchased on a reprint order form which will accompany page proofs.

Manuscript Requirements: Manuscripts should be typed double spaced on one side of the page only with wide margins and submitted in duplicate. While no maximum length of contributions is prescribed, authors are encouraged to write concisely.

The title should be brief. The author's name should be typed on the line below the title. The affiliation and address should follow on the next line. In the case of co-authors, respective addresses should be clearly indicated, as well as which author is to receive correspondence and proofs for correction. The body of the manuscript should be preceded by keywords. No abstract is required.

All mathematical symbols may be either handwritten or typewritten, but no ambiguities should arise. Greek letters and unusual symbols should be identified in the margin. Distinction should be made between capital and lower case letters; between the letter O and zero; between the letter l, the number one and prime; between k and kappa. A vector will be printed bold face and to indicate this the letter should be underscored with a single wavy line. The numbers identifying displayed mathematical expressions should be placed in parentheses on the right hand side of the page.

Illustrations are to be restricted to the minimum necessary. They should accompany the script and should not be included in manuscript pages. Line drawings should include all relevant details and should be drawn in black ink on plain white drawing paper or tracing cloth suitable for direct reproduction. Good photoprints are acceptable, but blueprints or dye-line prints cannot be used. Drawings, etc, should be about twice the final size required and lettering must be clear and "open", and sufficiently large to permit the necessary reduction in size. Photographs should be sent as glossy prints.

Figure legends should be typed on a separate sheet and placed at the end of the manuscript.

Tables should be numbered consecutively and, in order to save space, they should not repeat data which are available elsewhere in the paper, e.g. in a line diagram. In the interests of economy and in order to avoid the introduction of errors, tables will be reproduced by photo-litho offset means directly from the authors' typed manuscript. In cases of difficulty please consult the Photoreprographic Unit of your institution.

References to published literature should be quoted in the text in square brackets and grouped together at the end of the paper in numerical order of appearance. Abbreviations of journal citations should conform to the style used in the 4th Edition of *World List of Scientific Periodicals*. Double spacing must be used throughout.

Journal references should be arranged thus:

1. KNOWLES J. K. & REISSNER E., Note on the stress-strain relations for thin elastic shells, *J. math. Phys.* **37**, 269 (1958).

Book references should be given as follows:

2. CARSLAW H. S. & JAEGER J. C., *Operational Methods in Applied Mathematics*, 2nd edition. Oxford University Press (1953). Because of the international character of the Journal, no rigid rules concerning notation or abbreviation need be observed by the authors but each paper should be self-consistent as to symbols and units, which should be properly defined.
